

# UNI CS 3430 (Spring 2018)

## Operating Systems

### Exercises 1 (Complete by 1/19 in class)

---

**Note:** The point of the exercises is to help you reflect on and better understand the course material for the test. Please turn in your answers on printed paper (hopefully typed or at least printed neatly) at the beginning of class on 1/19.

1. Who are the two main programmers that wrote UNIX, and what were their roles?
2. What is POSIX?
3. Find a creative/funny analogy to distinguish between a process and a program.
4. Give an example where a uniprogramming environment is appropriate.
5. What is the difference between multithreading and running multiple single-threaded processes?
