

Data Structures (CS 1520) Fall 2015

Time and Place: 8 - 9:15 AM Tuesday and Thursday in ITTC 328 and 8 – 9:50 AM Wednesday in Wright 112

Web-site: <http://www.cs.uni.edu/~fienup/cs1520f15/>

eLearning Course: (Post lecture videos after class) CS 1520 Data Structures Section 01 Fall 2015

Class Email List: Send messages to Google group for the course at CS-1520-01-fall@uni.edu

Instructor: Mark Fienup (fienup@cs.uni.edu)

Office: ITTC 313

Phone: 273-5918 (Home 266-5379)

Office Hours: M: 9-11:45, 1:10-3; T: 9:30-11, 1:10-2; W: 10-11:45, 1:10-2; Th: 9:30-11, 1:10-2; F: 9-11:45

Prerequisite: Intro. to Computing CS 1510, and co-requisite Discrete Structures CS 1800

Goals: After this course, you should be able to (1) write “medium” sized programs using algorithmic problem solving and functional decomposition in analysis, design, and implementation, (2) implement and understand the algorithms for manipulating the abstract data types (ADTs) stacks, queues, lists, strings, trees, and graphs, and (3) be able to select appropriate data structures when writing medium size programs.

Text: *Problem Solving with Algorithms and Data Structures Using Python*, 2nd edition, by Bradley N. Miller and David L. Ranum. Franklin, Beedle & Associates. ISBN: 978-1-59028-257-1 (<http://www.pythonworks.org/pythonds>)
Free on-line version of the textbook: <http://interactivepython.org/courselib/static/pythonds/index.html>

Assignments: Assignments will consist of weekly laboratory exercises along with concurrent weekly or bi-weekly programming assignments.

Pedagogic Approach: In class, I'll tend to break up the lecture with active (and group) learning exercises to aid learning. While this is not formally graded, part (5%) of your grade will be based on your participation in (and attendance for) these in-class activities. Students benefit by (1) increased depth of understanding, (2) increased comfort and confidence, (3) increased motivation, and (4) being better prepared to work in groups on the job. This might sound great, but it will require you (and me) to work differently to prepare for class. Before the class, you must read the assigned reading, thought about what I asked you to think about, etc.; otherwise you won't be able to effectively participate during class.

Grading policy: There will be three tests (including the final). Tentative test dates and weighting of course components are:

In-class Work:	5 %
Labs:	15 %
Programming Assignments:	20 %
In-class Test 1:	20 % (about Oct. 1)
In-class Test 2:	20 % (about Nov. 5)
Final:	20 % (Tuesday, December 15 from 8 - 9:50 AM in ITT 328)

Grades will be assigned based on straight percentages off the top student score. If the top student's score is 92%, then the grading scale will be, i.e., 100-82 A, 81.9-72 B, 71.9-62 C, 61.9-52 D, and below 52 F. Plus and minus grades will be assigned for students near cutoff points.

Scholastic Conduct: You are responsible for being familiar with the University' Academic Ethics Policies (<http://www.uni.edu/pres/policies/301.shtml>). Copying from other students is expressly forbidden. Doing so on exams or assignments will be penalized every time it is discovered. The penalty can vary from zero credit for the copied items (first offense) up to a failing grade for the course. If an assignment makes you realize you don't understand the material, ask questions designed to improve your understanding, *not* ones designed to discover how another student

solved the assignment. The solutions to assignments should be **individual, original** work unless otherwise specified. Remember: discussing assignments is good. Copying code or test-question answers is cheating.

Any substantive contribution to your assignment solution by another person or taken from a publication (**or the web**) should be properly acknowledged in writing. Failure to do so is plagiarism and will necessitate disciplinary action. In addition to the activities we can all agree are cheating (plagiarism, bringing notes to a closed book exam, texting during an exam, etc.), assisting or collaborating on cheating is cheating. Cheating can result in failing the course and/or more severe disciplinary actions.

Special Notices:

- In compliance with the University of Northern Iowa policy and equal access laws, I am available to discuss appropriate academic accommodations that may be required for students with disabilities. Requests for academic accommodations are to be made during the first three weeks of the semester, except for unusual circumstances, so arrangements can be made. Students are encouraged to register with Student Disability Services, 103 Student Health Center, to verify their eligibility for appropriate accommodations.
- I encourage you to utilize the Academic Learning Center's assistance with writing, math, science, reading, and learning strategies. There is no charge for currently-enrolled UNI students. UNI's Academic Learning Center is located in 007/008 ITTC. Visit the website at <http://www.uni.edu/unialc/> or phone 319-273-2361 for more information.

Data Structures Schedule Fall 2015

Lect #	Tuesday		Thursday	
1	8/25	Ch. 1: Python Review; Classes	8/27	Ch. 2: Algorithm Analysis; Big-oh; timing
3	9/1	Ch. 2: Performance of Python Built-in data structures	9/3	Ch. 3: Linear data structures; stack implementations
5	9/8	Stack applications; Queue implementations	9/10	Queue applications; Deque
7	9/15	Ch. 6.6: Priority Queue: binary heap implementation	9/17	Unordered Lists implementations
9	9/22	Ordered List implementation	9/24	Ch. 4: Recursion; Run-time stack
11	9/29	Review for Test 1	10/1	Test 1
13	10/6	Recursion examples: backtracking and dynamic programming coin-change problem	10/8	Ch. 5: Searching: linear and binary search
15	10/13	Searching via hashing: chaining/closed-address implementations	10/15	Open-address implementations; Simple sorts: bubble, selecton, and insertion sorts
17	10/20	Advanced sorts: heap, merge and quick sorts	10/22	Ch. 6: tree terminology, binary tree implementation, traversals, parse tree application
19	10/27	Binary Search Tree implementation	10/29	Binary Search Tree delete method
21	11/3	Review for Test 2	11/5	Test 2
23	11/10	AVL trees	11/12	File structures vs. In-memory Data Structures
25	11/17	Ch. 7: Graph terminology, traversals (BFS and DFS)	11/19	Graph implementations Select Graph algorithms: topological sort
Thanksgiving Break				
27	12/1	Select Graph algorithms: Dijkstra's algorithm, Prim's algorithm	12/3	Select Graph algorithms: TSP backtracking and Approximation algorithm
29	12/8	TSP: Backtracking and Best-first search Branch-and-bound	12/10	Review for Final Exam
Final: 8:00 - 9:50 AM Tuesday, December 15 in ITT 328
