

Crafting Streaming Media: Issues and Answers from the INTIME Project, a PT3 Catalyst Grant

Presenter: Caroline Lange

Abstract:

Many issues arise during the development of streaming media for use on the Internet. If your organization receives a government grant to produce streaming media for educational use, the considerations seem to grow exponentially. INTIME (Integrating New Technologies into the Methods of Education) is a PT3 Catalyst Grant from the United States Department of Education with the mission of providing online video vignettes featuring teachers who effectively integrate technology into their classes within the context of the Technology as Facilitator of Quality Education Model. This presentation explains how INTIME successfully addressed pedagogical and technological issues to prepare streaming media content for use by teacher education faculty and preservice teachers.
