Use this set of 4 pairs of (x, y) values using Data Flyer:

1	1	(1, 1)
2	3	(2, 3)
3	4	(3, 4)
4	8	(4, 8)

Using the Data Flyer application, find the best fitting LINEAR EQUATION for the 4 pairs of (x, y) values.  $f(x) = m x + b$  or  $y = m * x + b$  or  $y = mx + b$ .

You are finding values for the SLOPE  $m$  and the INTERCEPT  $b$  for the equation.

7. What is the sum of the squares of the deviations for your function?
8. What is the SLOPE?
9. What is the INTERCEPT you found?
