Use this set of 5 pairs of (x, y) values using Data Flyer:

(1.5, 1), (2, 3), (3, 6), (4, 7), (4, 9)

Using the Data Flyer application, find the best fitting LINEAR EQUATION for the 5 pairs of (x, y) values. f(x) = m x + b   or   y = m * x   +   b   or   y = mx + b.
You are finding values for the SLOPE m and the INTERCEPT b for the equation.

7.   What is the sum of the squares of the deviations for your function?

8.   What is the SLOPE (m)?

9.   What is the INTERCEPT you found (b)?
