1. What will be the output of the following Excel VBA macro? Show the output on the given spreadsheet please.

```vba
Sub question6ExcelMacroVBAcode()
    For i = 1 To 12
        Cells(i, 1).Value = 100 + i
    Next i

    For j = 2 To 8
        Cells(j, j).Value = j * j
    Next j
End Sub
```
Homework on Dreamweaver – due date is September 9th at 2 p.m.

2. What happens if you type the < symbol when working in Dreamweaver? Describe and explain. This is a job interview question and there are 25 candidates who will be interviewed for the job. They are trying to assess how much Dreamweaver expertise you have and how productive you will be with the tool. Demonstrate your understanding in such a way that you stand out from all the other applicants. Demonstrate the depth of your understanding of Dreamweaver.

Outline/rough draft of the main points you will include in your answer and the structure of your interview answer. You may include a diagram and rough draft ideas here. Key terms and ideas you want to be sure to include. (Before you answer the question, you think about it and organize your approach. They are looking at your communication ability (written and spoken) as well as your technical knowledge for most job interviews!)

Your coherent, well-written, well-organized ESSAY question answer now goes here. It will be much better because you were forced to outline and rough-draft and brainstorm it first.
