

1. What property was changed so that the Wing of the bird would rotate from its bottom edge (where it connects to the bird's body) instead of from the center of the Wing? Name that AE Transform property, please. It is the ONLY Transform property that consists of TWO WORDS.

\_\_\_\_\_

2. What rotation was modified to make the wing of the bird flap up and down and simulate a flying bird?

XRotation                      or                      YRotation                      or                      ZRotation

3. What Rotation is being displayed in the example projected on the screen in the front of the room right now?

XRotation                      or                      YRotation                      or                      ZRotation

4. Draw a picture of what the Pick Whip icon looks like. It was drawn on the board during two different classes to help you grasp the meaning of that AE feature and Expressions assisting capability.

5. Beam is one of those selfish effects that obliterate the layer you apply it to. To bring back your Write-on scribble, click the \_\_\_\_\_ option at the bottom of Beam's controls. *Click the checkbox for this option so it becomes a checked checkbox.*

\_\_\_\_\_

*Fill in the blank question. The name of the option is a **3 word name**, 2<sup>nd</sup> word is a shorter word.*

6. What property from the Write-on effect was keyframed so that the scribble or writing of the name could be achieved by setting keyframes at different CTI positions? (Name of that property please).

\_\_\_\_\_

7. When you make some layer 3D in After Effects, what does each color arrow represent, i.e. what AXIS?

Blue or B                      =                      \_\_\_\_\_

Red or R                      =                      \_\_\_\_\_

Green or G                      =                      \_\_\_\_\_
