Part 2, Group Reflection #1A
Cory Houghton, Dan McGee, and Ashley Perrizo

Question 1 - What were the elements of programming that you learned in your FOP course?

The major elements of programming that we all commented on in our individual parts were: algorithms, conditionals, loops, functions and parameters or some combination of those topics. This would make sense since all computer programs are a mixture of those topics. We all seemed to comment that both parts of the course (Scratch and Python) looped through all of those ‘elements’ so we were able to see how those topics were able to be utilized in different computer programs.
